

# The St. John's Rehab Difference

## BY THE DATA

**4.4%**

**ST. JOHN'S**

**6.6%**

LOCAL FACILITIES  
AVERAGE VARIANCE

### SUCCESSFUL DISCHARGE FUNCTION VARIANCE

Lower variance score is better as indication of greater ability of clinical team in determining consumer's functioning upon start of treatment and ensuring therapy is provided to meet treatment goals at time of discharge.

**6.6%**

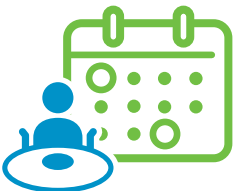

**ST. JOHN'S**

**10.6%**

LOCAL FACILITIES  
AVERAGE VARIANCE

### OUTSTANDING READMISSION RATE

Lower readmission rate is better as it indicates lower incidence rate that consumers returned to higher level of care following rehabilitation services stay.

**-.5%**

**ST. JOHN'S**

**-.14%**

LOCAL FACILITIES  
AVERAGE VARIANCE

### INDUSTRY LEADING LENGTH OF STAY VARIANCE

Lower length of stay variance score is better as indication of greater ability of clinical team in predicting consumer's length of stay upon start of treatment and ensuring therapy is provided to meet treatment goals at time of discharge.

**.3%**

**ST. JOHN'S**

**-6.3%**

LOCAL FACILITIES  
AVERAGE VARIANCE

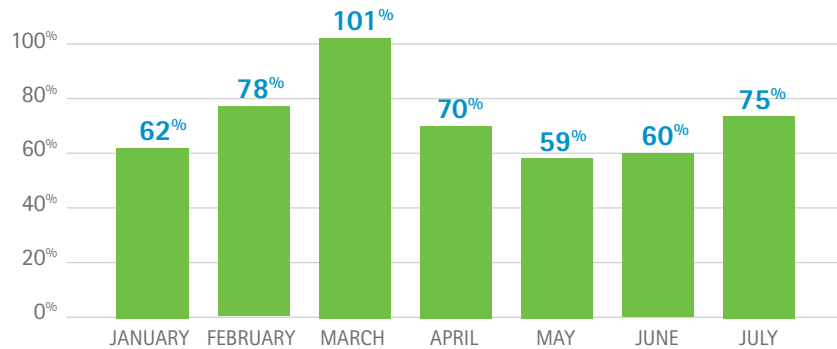

### EXCEPTIONAL THERAPY MINUTES PER DAY VARIANCE

Higher variance score is better as indication of delivering above the number of hours promised by clinical team at the start of treatment to be provided in order to meet treatment goals at time of discharge.
